CORE TECHNICAL SKILLS

- **Frontend:** React, TypeScript, JavaScript, Angular, HTML5, CSS3, Java
- **Backend:** .NET Core, Node.js, Express, RESTful APIs, SOAP
- **Databases & ORM:** PostgreSQL, MongoDB, Redis
- **DevOps & Cloud:** Docker, Azure, CI/CD pipelines, Git, Linux, AWS
- **Practices:** Scrum, unit & integration testing, code reviews, clean architecture
- **AI Tools:** Claude, GitHub Copilot, open code,
- **Languages:** English, Spanish

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 6+ years of experience shipping production web applications end-to-end across React/Angular frontends and .NET Core, Node.js and Java backends with Scrum methodology. I create enterprise software for government and financial institutions, where accuracy, security, and reliability matter most. Known for turning complex, manual, and highly regulated processes into simple, dependable digital products, and for working closely with non-technical users, such as judges and business analysts, to get the requirements right the first time. Strong in database design and performance tuning, and comfortable owning a feature from the first idea to production. Bilingual in English and Spanish, and now building on this foundation in the Canadian market through backend-focused training at Humber Polytechnic.

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Developer — Self-Employed, Toronto, Ontario (Remote) 2024 – Present

*Designed, built, and deployed custom web applications for small businesses, from first requirements through production. Delivered a web page, using **React**, **TypeScript**, **Node.js**, **Express**, and **PostgreSQL**, and deployed it with **Docker**. Handled ongoing maintenance, bug fixes, and feature requests directly with the client.*

Full-Stack Developer — Supreme Court of Justice, Bogotá, Colombia *2022 – 2024*

Owned Colombia's Supreme Court judicial workflow platform end-to-end — from architecture and database design through deployment — spanning case management, public search, and the institutional website.

Judicial Process Management System (ESAV) — Full End-to-End Ownership

- Reduced average case processing time from **4 months to 10 days** by systematizing **80%+** of court workflows — directly impacting thousands of legal cases.
- Designed the relational database schema in **PostgreSQL**, built backend modules in **.NET Core**, and implemented the full CRUD workflow across frontend and backend.

- **Led architecture discussions**, made UX trade-offs with magistrates and judges as stakeholders, and contributed to data analysis for strategic decisions.
- Containerized the application with **Docker** and managed cloud deployment with ongoing CI improvements.

Public Document Search Platform — consultaprovidencias.cortesuprema.gov.co

- Cut document search time from several minutes to **milliseconds** by redesigning database indexing and query logic across **500,000+** legal records.
- Designed and built the backend query engine, database structure, and **React** frontend for the public-facing search system.
- Defined application architecture with a focus on scalability, security, and performance.

Back-End Developer — SETI S.A.S, Bogotá, Colombia *2021 – 2022*

Property Sales Platform — davivienda.com (client: Davivienda)

- Built backend services for a property-selling platform at **Davivienda**, one of Colombia's largest banks, using REST and SOAP services for secure system integration.
- **Implemented financial history verification and customer risk-analysis logic**, ensuring correctness under strict regulatory requirements. **Front-End Developer**—Quantum Connexion, Bogotá, Colombia *2019 – 2021*

Corporate Platform — troop.com.co (client: Troop)

- Built responsive, cross-browser UI components in **Angular** and JavaScript with REST API integration for authentication and dynamic data.
- Applied frontend performance best practices to reduce load times and deliver a consistent, high-quality user experience across devices.

Front-End Developer — Quantum Connexion, Bogotá, Colombia *2019 – 2021*

Corporate Platform — troop.com.co

- Built responsive, cross-browser UI components in **Angular** and JavaScript with REST API integration for authentication and dynamic data.
- Applied frontend performance best practices to reduce load times and deliver a consistent, high-quality user experience across devices.

EDUCATION PROJECT

Humber Polytechnic — Institute AI, Quiz Generation Platform 2026

Role-based learning platform where teachers generate, review and publish AI-written quizzes and students take them with instant server-side grading. Angular 22 client over an ASP.NET Core 10 API backed by an OpenAI-compatible LLM provider.

EDUCATION - CERTIFICATIONS

Humber Polytechnic — Toronto, ON *Jun 2026 – Present*
Software Development Bridging Program, Back-End Stream

Universidad Distrital Francisco José de Caldas — Bogotá, Colombia *2023*
Bachelor of Telematics Engineering

Universidad Distrital Francisco José de Caldas — Bogotá, Colombia *2019*
Technologist in Data Systematization (Certification)
